Catching winds, ocean currents, and the attention of people around the world

XXI-Century

Students launch pre-built unmanned sailboats equipped with a GPS that transmits its position to our website twice a day.

Students follow their boats, learning about ocean currents, winds and waves.

When the boats land, we connect students from different nations and cultures.

www.educationalpassages.com

You can try to change the way you say it, the way you explain it or the way you teach it.

But it is not enough!

People will only keep in mind what moves them: what makes them happy, what makes them sad, what they love and what they hate..

Engage them emotionally,
then they will listen, they will discuss, they will learn,
they will ACT

Thank You!
